Objective:

Start establishing the pages and streamline the workflow process.

Key Results:

1. Line up components to create the landing page and other pages.

2. Install daisyUI – Tailwind Components.

3. Accomplish at least 20 story points and 5 user stories.

4. Catch up on tasks due to misunderstanding from the previous sprint (Sprint 0).

Sprint 1 Summary:

- **Sprint Velocity:** 20%

- **Focus Areas:**

  - Requirements adjustments to finalization

  - UI Pages

  - Enhancing Workflow process

  - API Development

- **Achievements:**

  - Managed workflow processes using Jira, GitHub Discussions – in raising issues.

  - Accommodated 28 story points and 8 user stories, currently under review.

  - Configured Jira for better deliverable tracking.

  - Nearly completed UI building

  - Utilized a style library to reduce styling effort.

Sprint 2 Plan:

- **Focus Areas:**

  - Implementing the landing page and its dependencies.

  - Configuring Jira Xray or alternative testing tools.

  - QA and code review deliverables implemented in Sprint 1 at the UAT environment.

  - Conducting backend onboarding.

  - Developing backend features.

- **Commitment:** Our team is committed to advancing the implementation phase with a focus on seamless task delegation, enhanced connectivity, and thorough testing to ensure high-quality deliverables. Additionally, we commit to taking on at least 20 story points and prioritizing the completion of UI user stories to further progress toward backend development.
