Sprint Velocity: 70%

What Went Well:

The team extended their efforts significantly in developing the project, making this week the most productive so far. We successfully implemented various features, including the wishlist, property route, property validations, and routing of some pages. Additionally, we conducted backlog grooming and moved some features to the 'Nice to add' section, such as profile pictures, subscriptions, in-app notifications, forgot passwords, and other enhancements to improve project presentation.

What Needs to Be Done:

For the upcoming sprint, we will focus on implementing key features such as the "Make an Offer" and the rating system. We will also implement the edit and delete functions for profiles and properties.

Areas for Improvement:

We will concentrate on development to complete everything in the next sprint so that the final sprint, Sprint 6, can focus on testing in the main/prod environment to ensure quality assurance before the final presentation to the panels.
